Full Information Protection Made Easy

Peace of Mind and Effective Protection

Securing information is not just fundamental, but an unquestionable need. The **information must be kept secure, under control, and accessible by the right people**. It is important to ensure the return on investment in cybersecurity and investing in effective measures.

Data protection should be an innovative mandate: **easy to deploy, robust, and easy to use**. All this aligns with your overall business processes & securing your organization's future.

24/7 Peace of Mind

Advanced Information Protection Simplified

State-of-the-art encryption and digital rights management for any file extension

SealPath deploys a layer of security that travels with the data, ensuring protection and controlling remotely the permissions on them, whether Office, Cad designs, PDFs or any other.

Protection with maximum granularity

SealPath enables precise control measures, so you can establish the control tools you need, from controlling what information can be used, to who can access it or from where it is accessed, inside or outside your organization. This facilitates compliance with the most demanding regulations.

Advanced real-time incident response and monitoring controls

SealPath allows you to remotely revoke access permissions from a user who is attempting to access or view your information and provides detailed reports of who is accessing, when, and to what information. Minimizes the risk of data leakage, and addresses ransomware.

Permanent & solid protection of your organization's information

With SealPath you will get peace of mind, knowing that your digital data assets are always encrypted through permanent control on authorized and unauthorized access. Permanent monitoring acts as a virtual sentinel, protecting you against emerging threats and unauthorized access attempts.

Reputation protection and cyber-resilience

SealPath's technology helps you facing any cyber incident or threat, securing your organization's business future with confidence. You can rest easy, knowing that SealPath not only safeguards your digital assets, but also fosters perfect alignment with strategic objectives.

Minimal Resources and Time Needed

Efficient Deployment and Management

SealPath can be deployed in a simplified manner in SaaS or On-Premise and requires minimal time and resource allocation, with no operational impact. With SealPath, you not only will secure your data, but also ensure sensible resource utilization and efficient investment. SealPath is the choice for optimal cybersecurity with minimal resources.

Resource-Efficient Security Solution

Designed for easy deployment for companies and corporations, working seamlessly with systems. SealPath can be adapted to each organization's needs, since it can decide who assigns the protection rights for each file, the user, the area leader, or the administrator of the solution, without depending on central, monolithic, and inflexible policies.

Enhanced return on investment (ROI)

SealPath not only prevents potential costs linked to data breaches but also enhances ROI. This cost-effectiveness, combined with its top-tier cybersecurity measures, provides a dual economic and cybersecurity benefit.

User Friendly

Simple and Intuitive Design

SealPath's data protection tool has been designed to provide ease of use and maximize user-friendly interaction. We understand that effective security can also enhance the user experience, not hinder it. Each user can protect their information by dragging and dropping it into a local folder, a network folder, in the SealPath application or just by assigning permissions per file individually.

Customer Success Stories & Trusted Customers

"We were looking for a solution that would protect the most sensitive, confidential files in the group without hindering anything. Now, we always have control of the documents without altering the way our users work".

- Iñaki Bizarro, IT Manager at Onnera Group

"SealPath stands out for its very intuitive operation, and the users themselves become ambassadors promoting the use of the tool among their colleagues"

- Pablo Herrero, head of security at Ferrovial

SECTORS
